

Loopback, StrongLoop ARC and IBM Bluemix

We are very fortunate to have Mr. Raymond Camden, a developer advocate for IBM. His primary focus is on MobileFirst, hybrid mobile development, and client-side technologies. In this lesson, he introduces us to StrongLoop ARC, a graphical UI to design, implement and manage a Loopback server. In addition, he introduces us to IBM Bluemix briefly and gives a quick tour of the support available in the Bluemix platform for Node.js and Loopback based server deployment. The additional resources give pointers to some of Mr. Camden's own blog posts elaborating on this further. Also pointers to various IBM Bluemix resources, in particular with reference to Loopback and StrongLoop are included. At the end of this lecture, you will be able to:

- Use StrongLoop ARC to design, implement and deploy Loopback servers
- Use IBM Bluemix support for designing and deploying Node.js and Loopback based servers on the Bluemix platform.
