

Exercise (Instructions): Images and Media

Objectives and Outcomes

In this exercise, we will explore the Bootstrap classes to support image and media on a website. In particular, we will look at how to include images on a website, how to make use of images within a media objects. At the end of this exercise you will be able to:

- Use Bootstrap classes to include a responsive images in a website
- Use a media object to include images and description on a website

Exercise Resources

img.zip

Set up for the Exercise

- Download the img.zip file that we provide above and unzip it in the *conFusion* folder. This should create a folder named *img* there.
- We will now update the *index.html* file to include images and media objects on the web page.

Adding the Restaurant Logo

- We will now add the restaurant logo to the Jumbotron. In index.html go to the header row inside the jumbotron and replace the second <div> column with the following code:

```
1      <div class="col col-sm align-self-center">
2          
3      </div>
```

You will immediately notice the restaurant logo being displayed in the jumbotron.

- Next, we will add the logo to the navbar where we display the restaurant brand. Go to the navbar and replace the code there for the <a> tag with the "navbar-brand" class with the following code:

```
1      <a class="navbar-brand" href="#"></a>
```

Note the inclusion of the logo in the navbar.
