

Practice Exercise for Avatar class

This is a practice exercise created by Moria, a long time community TA for this class, that is designed to mimic some of the features of the BankAccount class from Quiz 6a . If you have trouble with the BankAccount problem, come back and try working through this practice exercise. Don't hesitate to look at the answer if you are having trouble. Since it's a practice exercise and not graded, you can freely discuss it in the forums and even post your code when asking for help!
