

Angular Forms and Form Validation

2/2 questions correct

Excellent!

Retake

Next (/learn/angular-js/supplement/XKWHE/angular-forms-and-form-validation-additional-resources)

1.

If I declare a checkbox and associate it with a JavaScript object property as follows:

```
<input type="checkbox" name="accept"
      ng-model="permission.accept">
```

What values can the JavaScript variable accept take?

☐ Boolean values: true and false

Well done!

It's a boolean variable

☐ Any integer value

2.

What will be the value of the following expression in Angular forms:

```
feedbackForm.$pristine && feedbackForm.$dirty
```

☐ Always false

Well done!

☐ Always true
