Angular UI-Router and Resolve: Objectives and Outcomes

In this lesson, you will learn about the use of the resolve feature of Angular UI-router in order to simplify the controllers and be able to provide data to the controllers. In addition, you will learn about watching for events on the scope in order to detect state changes in the ui-router. At the end of this lesson, you will be able to,

- Use resolve within the ui-router state to support a map of dependencies, and provide data to the controller
- Use the `$rootScope` to watch for events
