

Ionic Modals, Forms, Popovers I Coursera

Assignment: Ionic Modals, Forms, Popovers Submit by February 21, 11:59 PM PT

Important Information

It is especially important to submit this assignment before the deadline, February 21, 11:59 PM PT, because it must be graded by others. If you submit late, there may not be enough classmates around to review your work. This makes it difficult - and in some cases, impossible - to produce a grade. Submit on time to avoid these risks.

Assignment Resources

Assignment Overview

In this assignment, you will support a popover in the `dishdetail.html` template with two options. The first option will enable you to add the dish to your favorites. The second option will bring up a form within a modal that enables you to add your comments on the dish.

Assignment Requirements

This assignment consists of three tasks:

Task 1

- Add a button to the header bar that when clicked will bring up a popover
- The popover template should be defined in a file named *dish-detail-popover.html*
- Appropriate code is added to `DishDetailController` to support the popover.

Note: Download `style.css` file provided above and replace the `style.css` file within the `www/css` folder within your project. This file contains some CSS customization for the Popover.

Task 2

- When the user clicks on the "Add to Favorites" option in the popover, then add the dish to the list of your favorite dishes.

Task 3

- When the user clicks on the "Add Comment" option in the popover, bring up a modal containing the form that enables the user to add comments on the dish

- The form should contain three fields: Rating, Name and Comment. Use a Select element for the Rating, and a textarea for Comment fields.
- The form should be defined a template named *dish-comment.html*
- The modal is properly configured within DishDetailController
- When the user submits the comment, it should be added to the list of comments for the dish.

Review criterialess

Your submission will be graded based on the following criteria:

Task 1

- The nav-button has been added to the header bar
- The popover is appropriately designed to show the two options in the template file.
- The popover is configured with the appropriate code in DishDetailController

Task 2

- The dish is added correctly to the list of favorites when the user selects the option

Task 3

- The modal containing the form is shown when the user selects the "Add Comment" option.
- The form is properly configured within the template
- The modal is properly configured within DishDetailController
- The comment is properly added to the list of comments for the dish when the user submits the comment.
