

After completing the capstone, you will be able to...

1. Independently implement a Java project of significant size.
2. Pose questions that can be answered with social network data.
3. Develop or find/select algorithms to answer these questions.
4. Make software design decisions.
5. Describe a technical project both through written reports and oral presentations.
6. Review others' code design and oral presentation.
7. Analyze algorithms to assess their appropriateness for solving a given problem on real-world data.
8. Iterate a design to improve style and efficiency.
