

Backend as a Service: Objectives and Outcomes

In this lesson you will be introduced to Backend as a Service (BaaS), a recent phenomenon that is overtaking the way web app and mobile app developers are approaching the server-side support. You will learn about the various features, advantages and disadvantages of the BaaS approach. You will also be introduced to Loopback, an open source BaaS platform as an example. At the end of this lesson, you will be able to:

- Position the use of BaaS as an alternative to full-fledged in-house server-side implementation
- Understand and use Loopback to quickly build backend support for your applications
