# Exercise (Instructions): Gulp Part 2

#### **Objectives and Outcomes**

In this exercise, you will continue to learn to use Gulp. Thereafter you will configure a Gulp file with a set of tasks to build and serve your web project. At the end of this exercise, you will be able to:

• Configure the Gulp file with a set of tasks to build the distribution folder for the web project.

#### Copying the Files and Cleaning up the Dist Folder

• We will now create the tasks for copying the font files and cleaning up the distribution folder. To do this we will first install the *del* Node module and require it in the Gulp file as follows:

```
1 npm install del --save-dev
```

```
1 var ...
2 del = require('del'),
3 ...
```

• Next, we will add the code for the Clean task and the copyfonts task as follows:

```
1 // Clean
2 gulp.task('clean', function() {
3    return del(['dist']);
4 });
5
6 gulp.task('copyfonts', function() {
7    gulp.src('./node_modules/font-awesome/fonts/**/*.{ttf,woff,eof,svg}*')
8    .pipe(gulp.dest('./dist/fonts'));
9 });
```

## Compressing and Minifying Images

• We will now install the *gulp-imagemin* plugin and configure the *imagemin* task. To do this we install the plugin and require it as follows:

```
1 npm install gulp-imagemin --save-dev
```

```
1 var ...
2 imagemin = require('gulp-imagemin'),
3 ...
```

Next, we create the imagemin task as follows:

#### Preparing the Distribution Folder and Files

• We now install the gulp-usemin and other related Gulp plugins and require them as follows:

```
1 npm install gulp-uglify gulp-usemin gulp-rev gulp-clean-css gulp-flatmap gulp
    -htmlmin --save-dev
2
```

```
1 var ...
2   uglify = require('gulp-uglify'),
3   usemin = require('gulp-usemin'),
4   rev = require('gulp-rev'),
5   cleanCss = require('gulp-clean-css'),
6   flatmap = require('gulp-flatmap'),
7   htmlmin = require('gulp-htmlmin');
```

We configure the usemin and the build task as follows:

```
gulp.task('usemin', function() {
 2
      return qulp.src('./*.html')
 3
      .pipe(flatmap(function(stream, file){
 4
          return stream
 5
             .pipe(usemin({
 6
                css: [ rev() ],
                html: [ function() { return htmlmin({ collapseWhitespace: true })} ]
                js: [ uglify(), rev() ],
 8
 9
                inlinejs: [ uglify() ],
10
                inlinecss: [ cleanCss(), 'concat' ]
11
            }))
12
        }))
        .pipe(gulp.dest('dist/'));
13
14
    });
15
    gulp.task('build',['clean'], function() {
        gulp.start('copyfonts','imagemin','usemin');
17
18
    });
```

Save the Gulp file

## Running the Gulp Tasks

• At the command prompt, if you type *gulp build* it will run the build task:

1 gulp build

• Do a Git commit with the message "Gulp Part 2"

### Conclusions

In this exercise, you learnt to use Gulp, install Gulp plugins, configure the gulpfile.js and then use Gulp to automate the web development tasks.

Mark as completed
