At the end of this week (at the end of the next lesson), we'll have you repeat the exercise and self-assessment you just did. We want you to practice a lot before then. Below we have listed a few resources on where to find questions that are similar to the ones you might be asked in this type of interview setting:

- http://codingbat.com/ Tons of Java programming problems, from the simple to the more complex
- *Cracking the Coding Interview* by Gayle Laakmann McDowell. We highly recommend this whole book, but the website also has a lot of great information: http://www.crackingthecodinginterview.com/
- CS9: Problem-Solving for the CS Technical Interview, Stanford University: A course offered by Cynthia Bailey Lee at Stanford University with lots of great information and problems.
- https://www.interviewcake.com/ This site allows you to access a few free questions. If you like it, you can decide to purchase more.
- http://javarevisited.blogspot.com/2011/06/top-programming-interview-questions.html This site has a number of good questions.
- Want more? Google it! There's a lot out there!
